

Indoor Illuminated Thin Edgelit Display

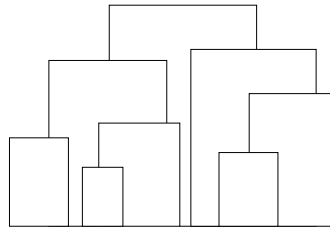

Edgelit displays offer high intensity illumination in a remarkably thin 1 5/8" deep display, one of the thinnest available! The single-sided Edgelit features an elegant beveled snap frame while the double-sided model features a gently curved snap frame. The Edgelit frame houses two brilliant fluorescent bulbs, while laser-etched acrylic ensures even diffusion as bright as an LCD screen. The perfect solution when you want to present a high-end look with an exceptionally thin display!
